

productinformation head collar rack

This specially simple holder has been developed for safety in stable alleys. It is always used where the noseband has to be within easy reach, but for safety reasons a solid holder should not be used. It reduces the risk of injury enormously and is completely sufficient to remove the halter. The weather and ozone resistant material, the anti-slip surface and the special shape are perfectly matched.

material:

TPU (elastomer)

Wood screws V2A Drive TX25

properties:

elastically deformable

temperature resistant -30°C to at least 120°C
